

## PRODUCT INFORMATION

C1838RX is a complete package of high yields and defense. Performs well across the late Group I and the early Group II zone. Medium-tall with a thin-line canopy, excellent standability; and very good White Mold tolerance.

- A complete package of high yields and defense.
- Medium tall with a thin-line canopy, excellent emergence and standability.
- Two genes for resistance to Phytophthora Root Rot. with great defensive package against IDC, SDS, BSR, WM and SCN.
- Broadly adapted across the entire Group I zone and has good southern performance.

## MANAGEMENT TIPS

Excellent adaptability into no-till and minimum tillage and well adapted to all row spacings. Widely adapted, and has good southern movement. Handles stress and non-stress environments equally as well.

Stem Canker	█	█	█	█	█	█	█	█	█

9 = Excellent 1 = Poor N/A = Not Available

GDU's are estimates based on observations and are to provide guidelines for area adaptation. Performance may vary from location to location and from year to year, as local growing, soil and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible and should consider the impacts of these conditions on the grower's fields. Preferred Placement Zones represent the best areas of adaptation for a product based on in-field observations, genetic background, and trial data. Products may fit within only a portion of a zone, and products may perform well in other areas not identified. Contact your sales team for details.
