

VT Double Pro® RIB Complete® Corn

PRODUCT INFORMATION

LG44C27 looks to be a very strong performer across the upper Midwest. Tall robust plants have excellent standability. High test weight grain is produced by very girthy ears.

- Very high yield potential, has outstanding data against commercial checks.
- A semi-flex ear type with very good test weight and excellent dry down.
- Offers excellent agronomics and good late season intactness when positioned in zone.
- Widely adapted across soil types, yield environments and exhibits good drought tolerance.

MANAGEMENT TIPS

Has shown the ability to handle stress and perform well under lower populations. Performs well over a wide range of yield environments. Broadly adapted to all soil types. Fungicides are recommended when planting in continuous corn.

9 = Excellent 1 = Poor N/A = Not Available

GDU's are estimates based on observations and are to provide guidelines for area adaptation. Scores and characteristics are assigned by LG Seeds based on comparisons with similar maturity LG and competitive products through internal field testing. Preferred Placement Zones represent the best areas of adaptation for a product based on in-field observations, genetic background, and trial data. Products may fit within only a portion of a zone, and products may perform well in other areas not identified. Contact your sales team for details.
